

A new alliance between
technology and agriculture

AGRINSIGHT[®]

control manage grow

100% made in Italy

YOUR ORCHARD

AGRINSIGHT[®]

control manage grow

JUST A CLICK AWAY

AGRINSIGHT SOFTWARE

remotely control the real-time data via smartphone, tablet or computer

Your orchard just a click away

Monitor your orchard with sensors

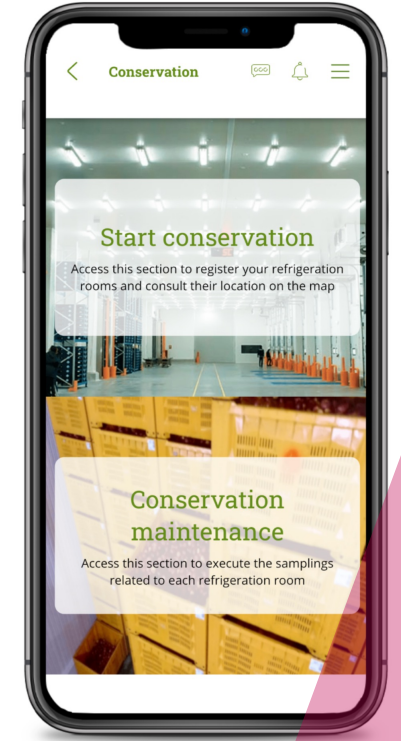

Take total control of all the factors

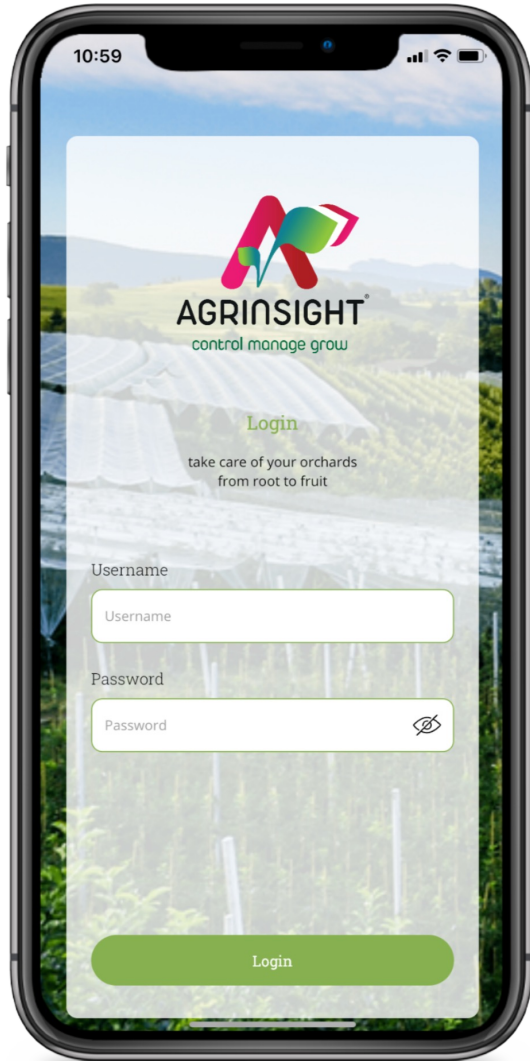

Schedule and check all activities

Verify fruit values during conservation

MANAGE INFORMATION RELATING TO MULTIPLE CROPS

CHOOSE FROM TWO DIFFERENT MODES OF THE USER

OPERATIONAL MODE

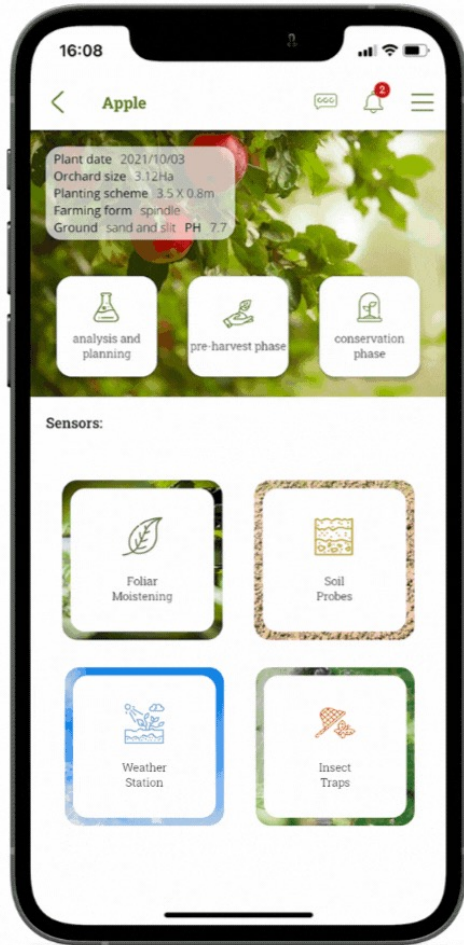

SUPERVISOR MODE

+ interactive. AGRINSIGHT offers all the necessary **support** to the user who must **manage the orchard**, with the possibility to **interact** with Italian experts via the **integrated chat** and enter data from samples.

+ information. AGRINSIGHT offers all **useful information and data** to the user wishing to view the **status of the orchard** and the **progress of activities**, as well as the **chat**.

MONITOR YOUR ORCHARD WITH SENSORS

LEAF WETNESS

Based on the leaf sensors, AGRINSIGHT **provides information** on possible ongoing infections, Mills table reference values, the **temperature and humidity of the air**. When anomalies are found, **alerts are activated** and the interventions to be carried out with defense products are displayed.

SOIL PROBE

Based on the data collected by the soil probes, AGRINSIGHT **provides information** on the **temperature, tension, and humidity of the soil**. When anomalies are found, **alerts are activated** and the interventions to be carried out with fertilizations are displayed.

WEATHER STATION

According to the weather station, AGRINSIGHT **provides information** on **air temperature, wind speed and direction, and the amount of rain**. When anomalies are found, **alerts are activated** (for example, risk of freezing) and the interventions to be performed by applying treatments are displayed.

INSECT TRAP

Based on the data collected by insect traps, AGRINSIGHT **provides information** on the detected insects, **defining the species of the dangerous ones**. When the numerical limit of dangerous insects is exceeded, **alerts are activated** and the interventions to be performed to prevent infections by applying defense products are displayed.

WEATHER STATION

3

INSECT TRAP

1 Weather station

Reliable, simple to use and easy to install weather station that works with **solar power** with GPS and GPRS

- rain **quantity**
- air **temperature** and **humidity**
- **radiation** and **brightness**
- wind **direction** and **speed**
- leaf **wetness** and a **dripping**

Leaf wetness and a dripping sensor

- the leaf **temperature**
- **detects** dripping events
- **resistant** to phytosanitary treatments
- **predict** the development of fungal diseases
- better **modulate** the washout of any product

3 Insect trap with camera

- **obtains** a high-resolution 8 megapixels camera
- **works** on 5W solar panel water-resistant connector
- TRAP-VISION **software**
- remote **monitoring** of insect catches
- daily image **processing service**
- **planning** insecticide treatments

The system, one of the **most accurate** on the market, was **tested** in collaboration with the University of Pisa.

- **measures** the dielectric characteristics
- **obtains** humidity and conductivity
- 5W solar panel with water-**resistant** connector
- GPS satellite **locator**

Soil probe

4

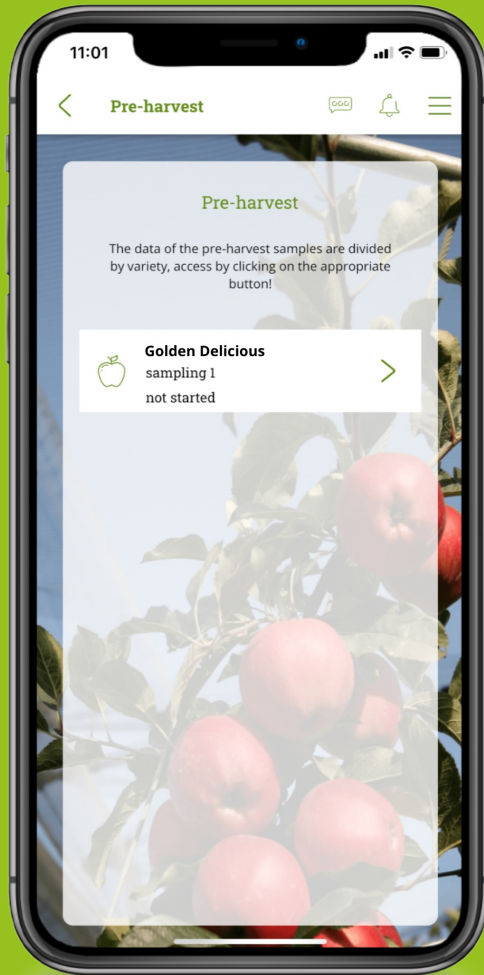

AGRINSIGHT KIT

for **pre** and **post-harvest** sampling

- fruit size control gauge with necessary quantity of rings
- accurate pocket scales
- penetrometer to check pulp hardness
- refractometer with brix gradation
- digital thermometer with gradation probe
- acidimeter for measuring fruit acidity
- microanalyzer: optical instrument with zoom up to 30 for precise focusing

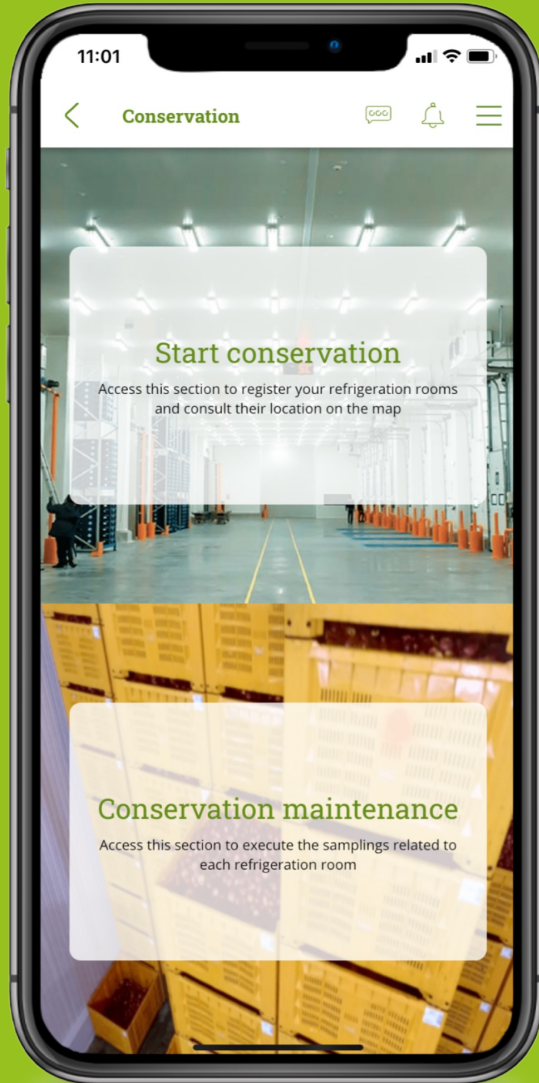

DETERMINE THE RIGHT TIME TO HARVEST

- **make samples using AGRINSIGHT KIT**
- **record data in the pre-harvesting section**
- **compare the data with the optimal parameters**
- **determine the right harvesting period**

ENSURE THE CORRECT FRUIT CONSERVATION

- ↑ **monitor** activities through sampling
- ↑ **keep** intact organoleptic characteristics
- ↑ **make sure** that the fruit is stored correctly
- ↑ **request** the support of Italian technicians
- ↑ **optimize** the management of fruit activities
- ↑ **obtain** the highest quality fruit

AGRINSIGHT[®]
